

Advanced laser-optical measurement techniques in fluid dynamics

LDA, PDA, PIV, PTV(S)

Jenő Miklós Suda, PhD

2011

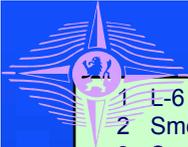

Laser-optical measurement techniques

- LDA** Laser Doppler Anemometer (velocity vector component(s), Reynolds-stresses, turbulent characteristics)
- PDA** Phase Doppler Anemometer (velocity vector component(s), Re-stresses, turbulent characteristics and also particle diameter)
- PIV** Particle Image Velocimetry (2D/3D velocity vector field, Re-stresses, turb. characteristics)
- PTV(S)** Particle Tracking Velocimetry and Sizing (2D velocity vector component(s), Re-stresses, turbulent characteristics and also particle diameter, size)

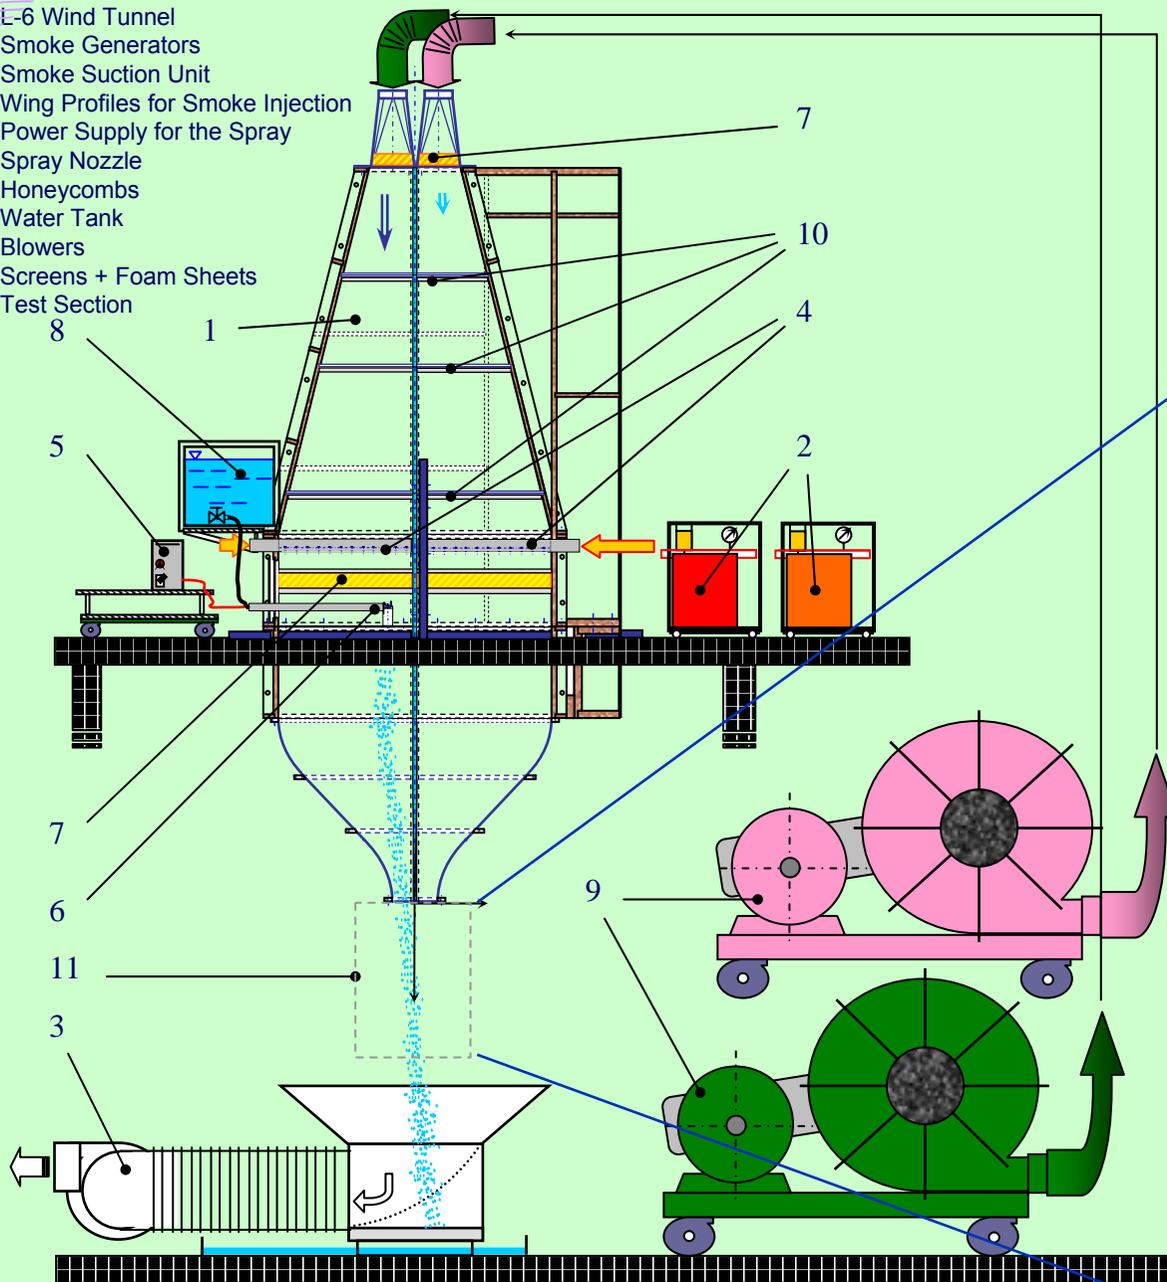

VON KÁRMÁN INSTITUTE FOR FLUID DYNAMICS

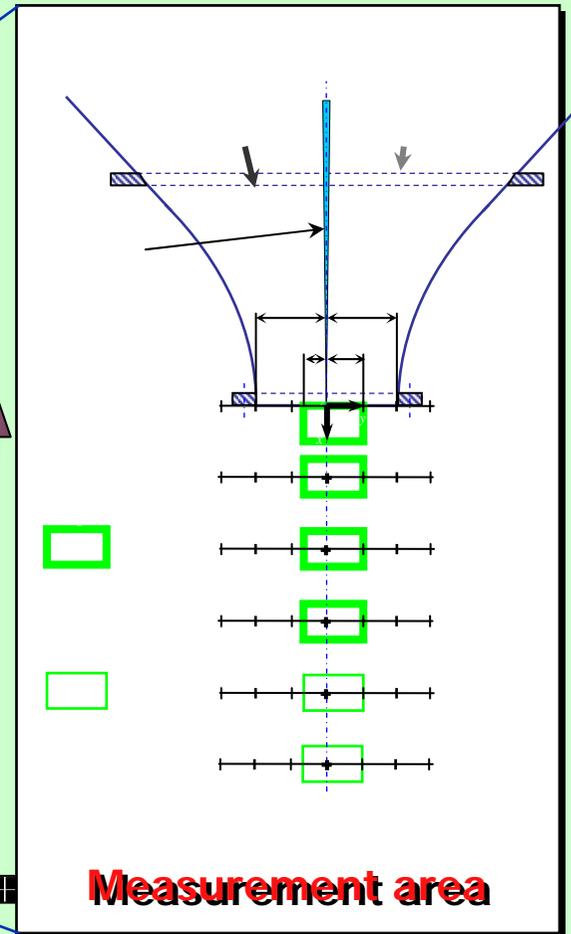

Measurements performed at the Von Kármán Institute for Fluid Dynamics (BELGIUM) in course of a Diploma Course 1999-2000

- 1 L-6 Wind Tunnel
- 2 Smoke Generators
- 3 Smoke Suction Unit
- 4 Wing Profiles for Smoke Injection
- 5 Power Supply for the Spray
- 6 Spray Nozzle
- 7 Honeycombs
- 8 Water Tank
- 9 Blowers
- 10 Screens + Foam Sheets
- 11 Test Section

Set-up „L-6” twin-jet wind tunnel

PARTICLE IMAGING VELOCIMETRY

Particle Image Velocimetry PIV

- CCD
 - ◆ image 1280×768 pixel ($\approx 85 \times 50$ mm)
- Nd:YAG impulse laser /6W, 0-20 Hz/
- 3D positioning
- SensiCam imaging software

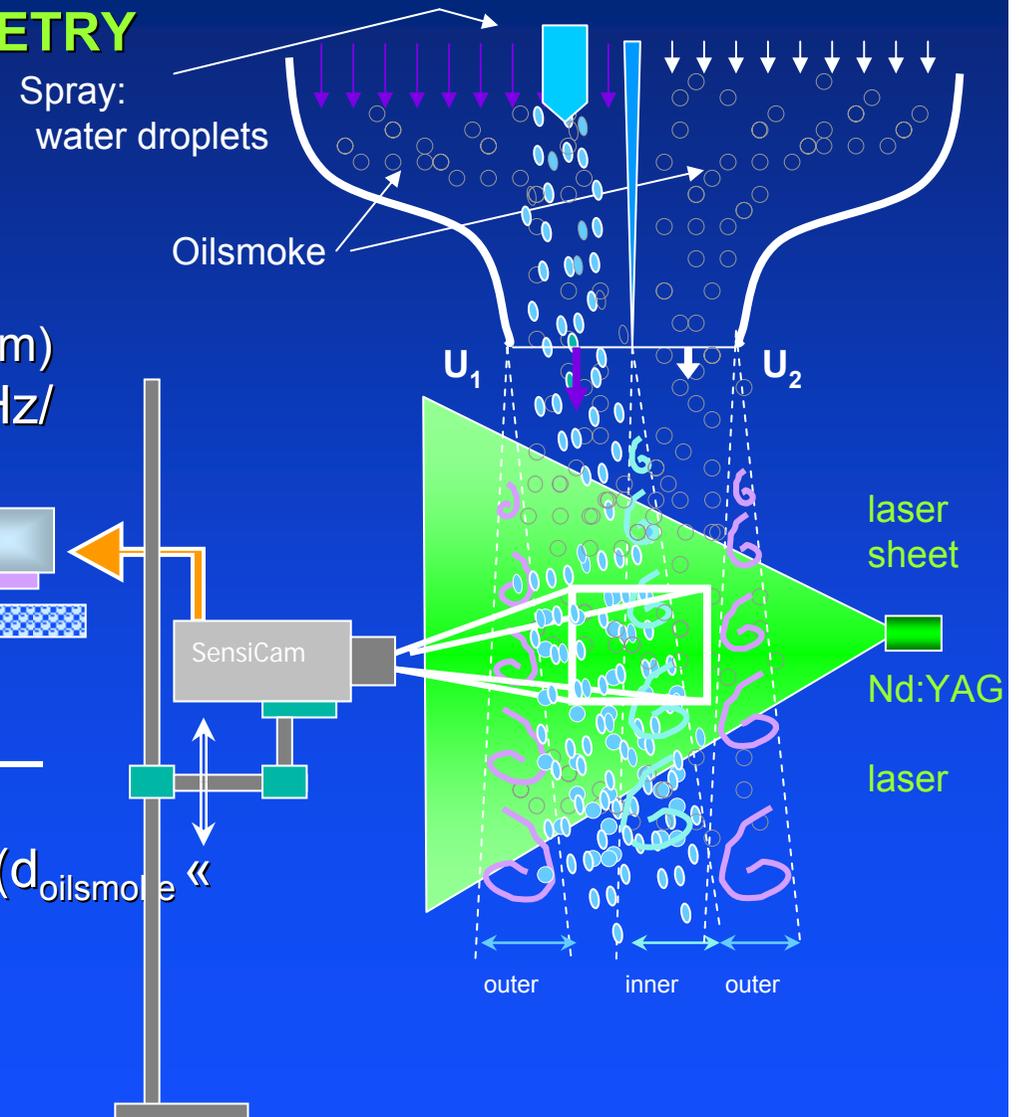

Particle Tracking Velocimetry and Sizing - PTV(S)

For two-phase flow

- Phase discriminatig by image size ($d_{\text{oilsmoke}} \ll d_{\text{water droplet}}$)

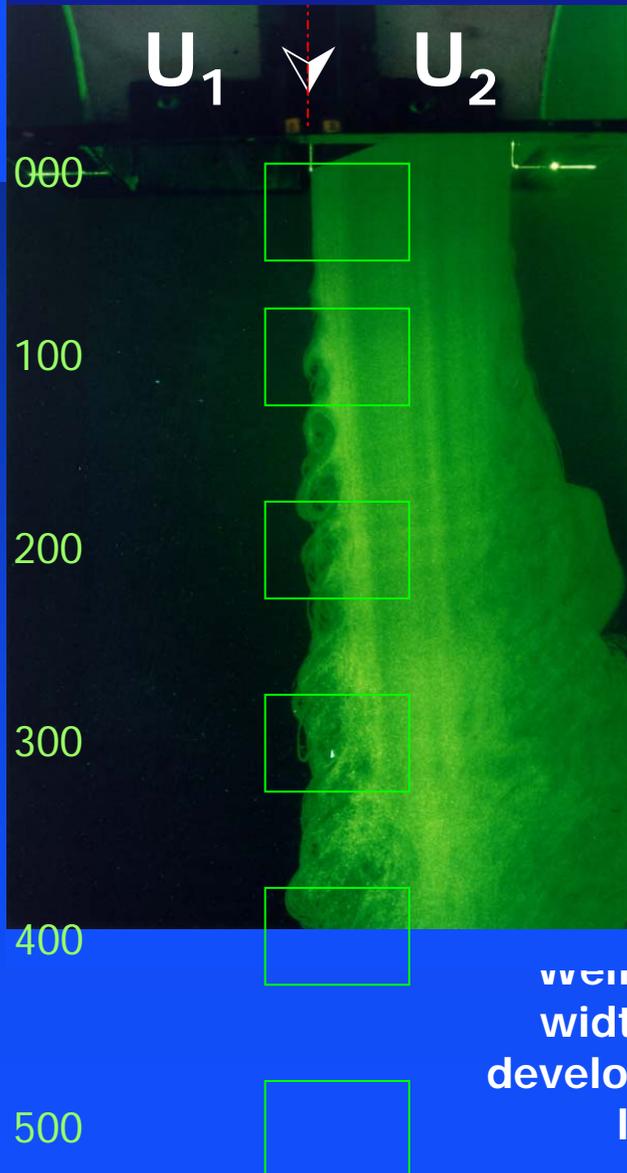

Data processing:

- Matlab, TecPlot, Excel, etc.

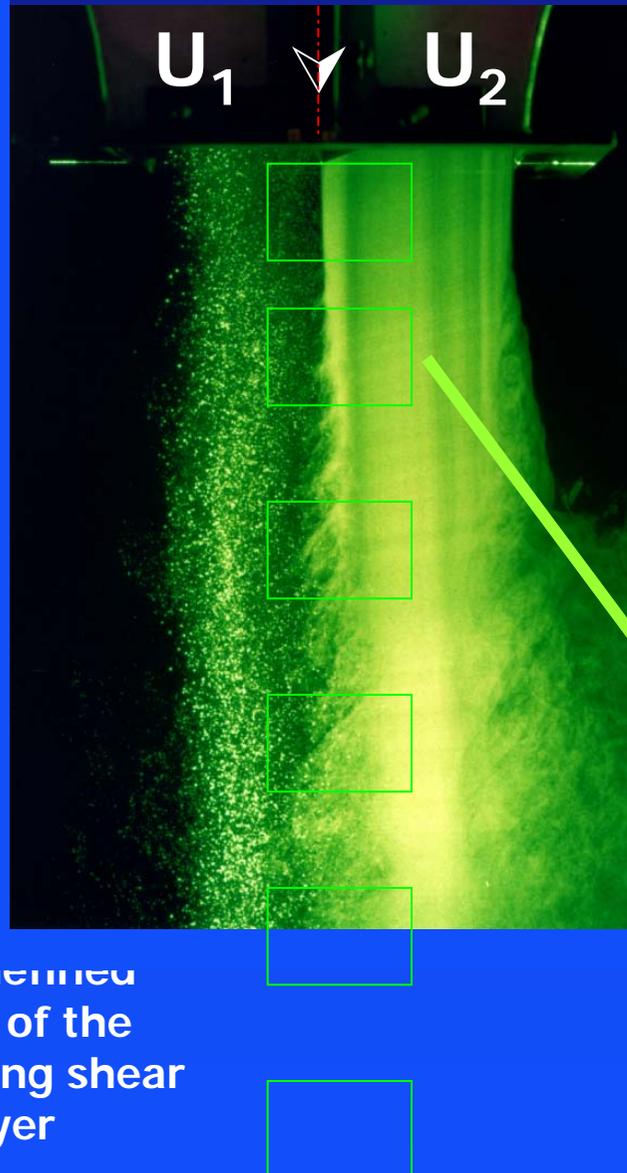

Single phase flow

Two-phase flow

well defined
width of the
developing shear
layer

Flow visualization

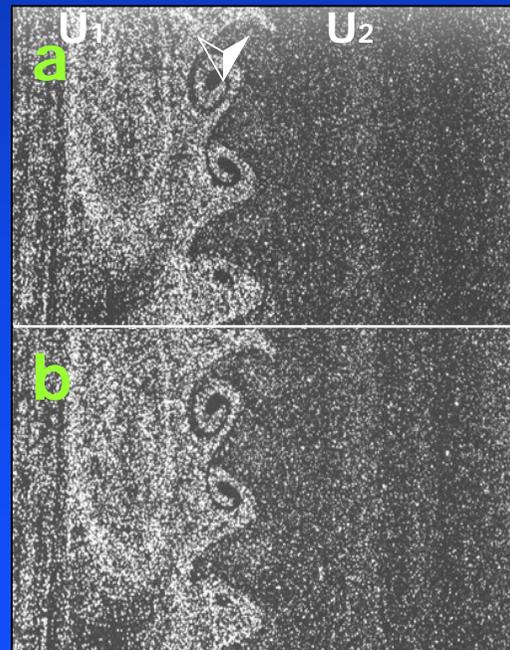

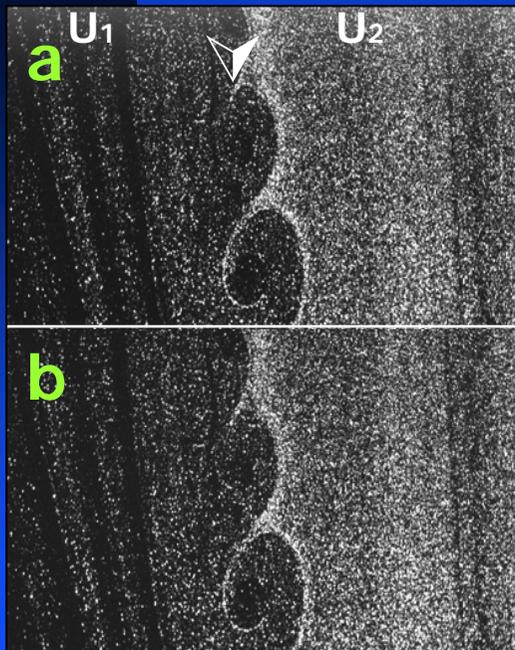

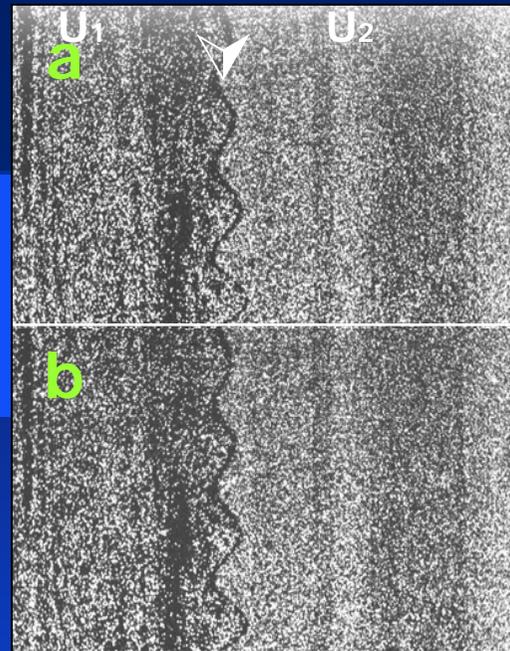

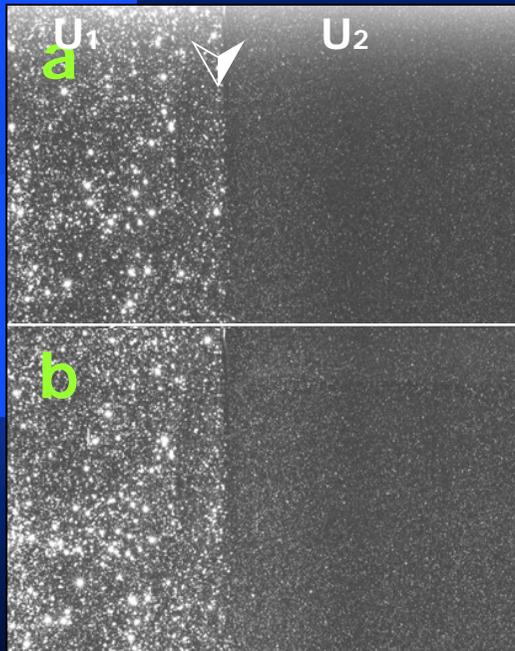

$U_1 = 2 \text{ m/s}$
 $U_2 = 1 \text{ m/s}$

Digital image
acquisition

Particle
Imaging
Velocimetry

PIV

PTV(S)

Successive
images

$$\Delta t_{a-b}$$

displacement

$$\Delta x, \Delta y$$

velocity vectors

$$\underline{v}$$

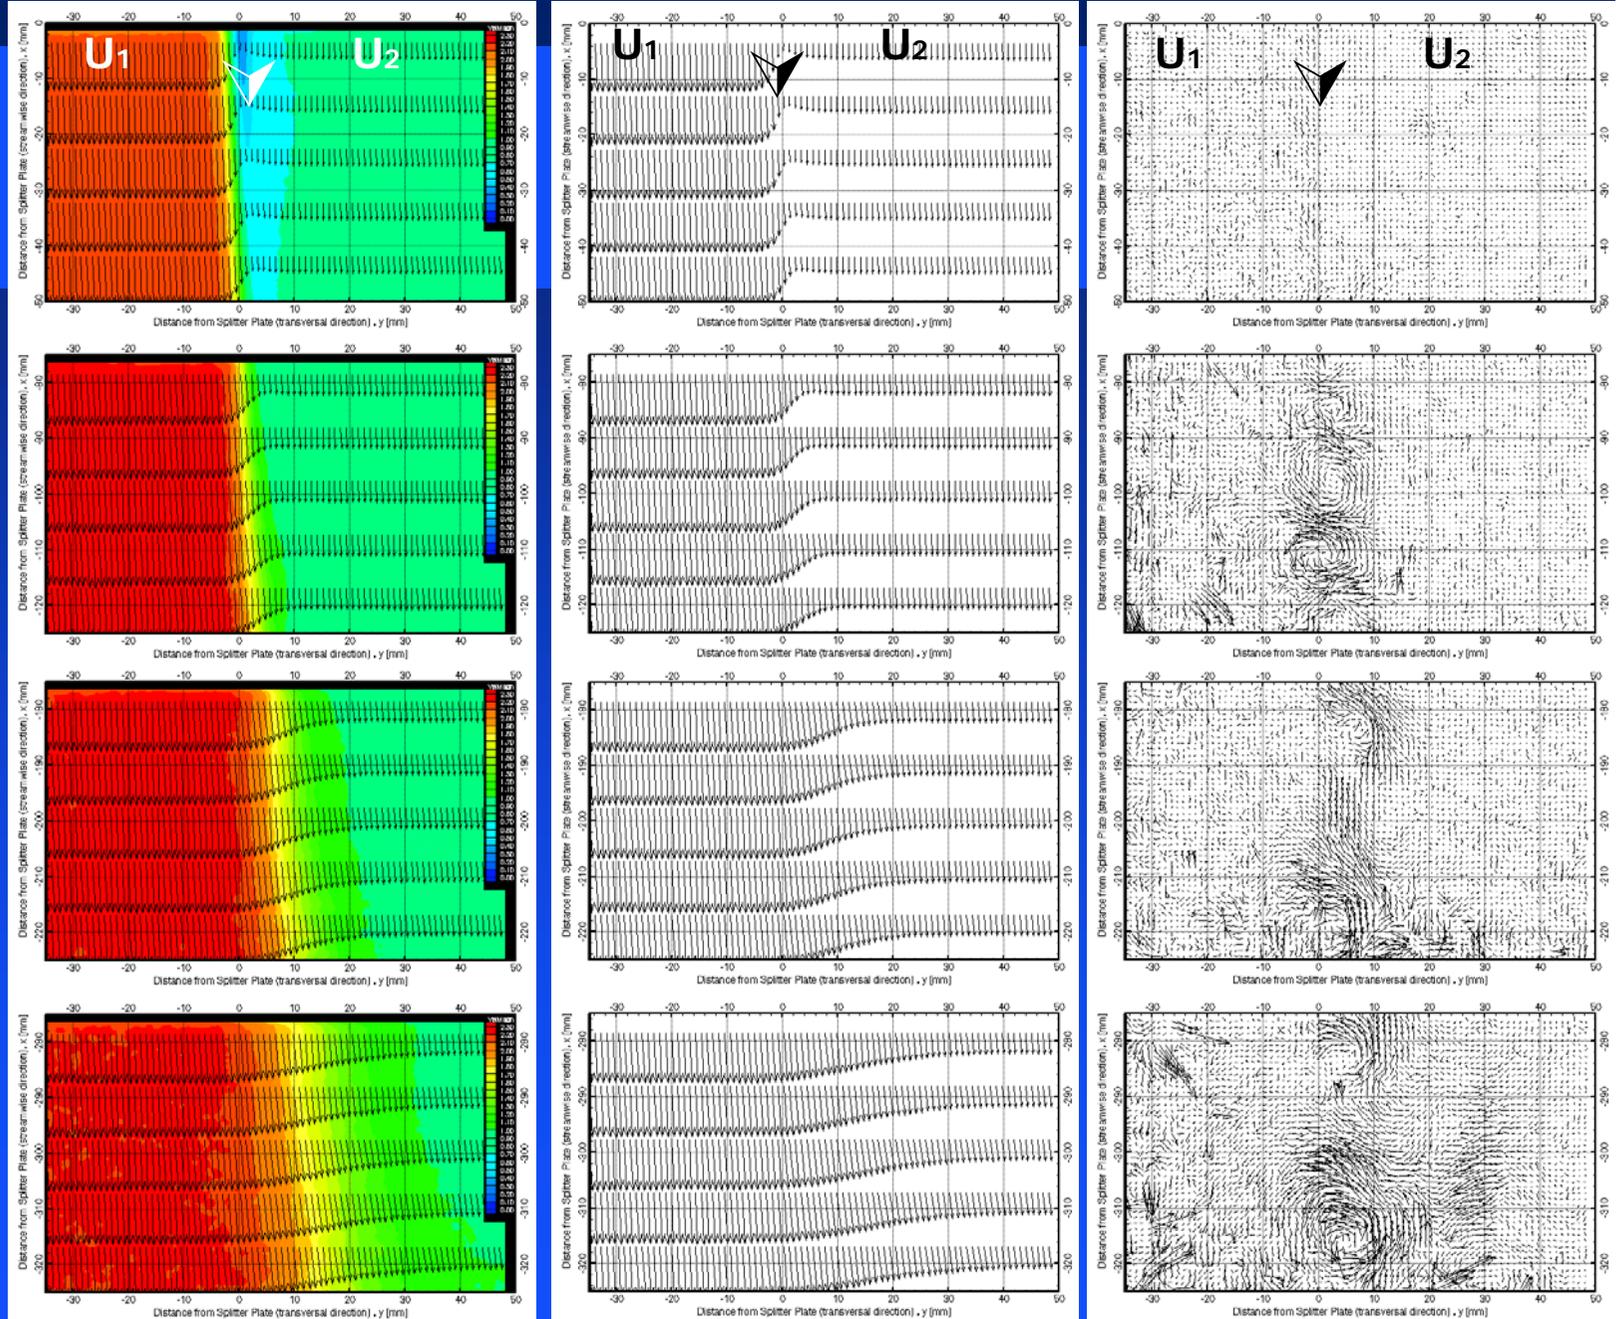

PIV Particle Image Velocimetry

Result

159x95

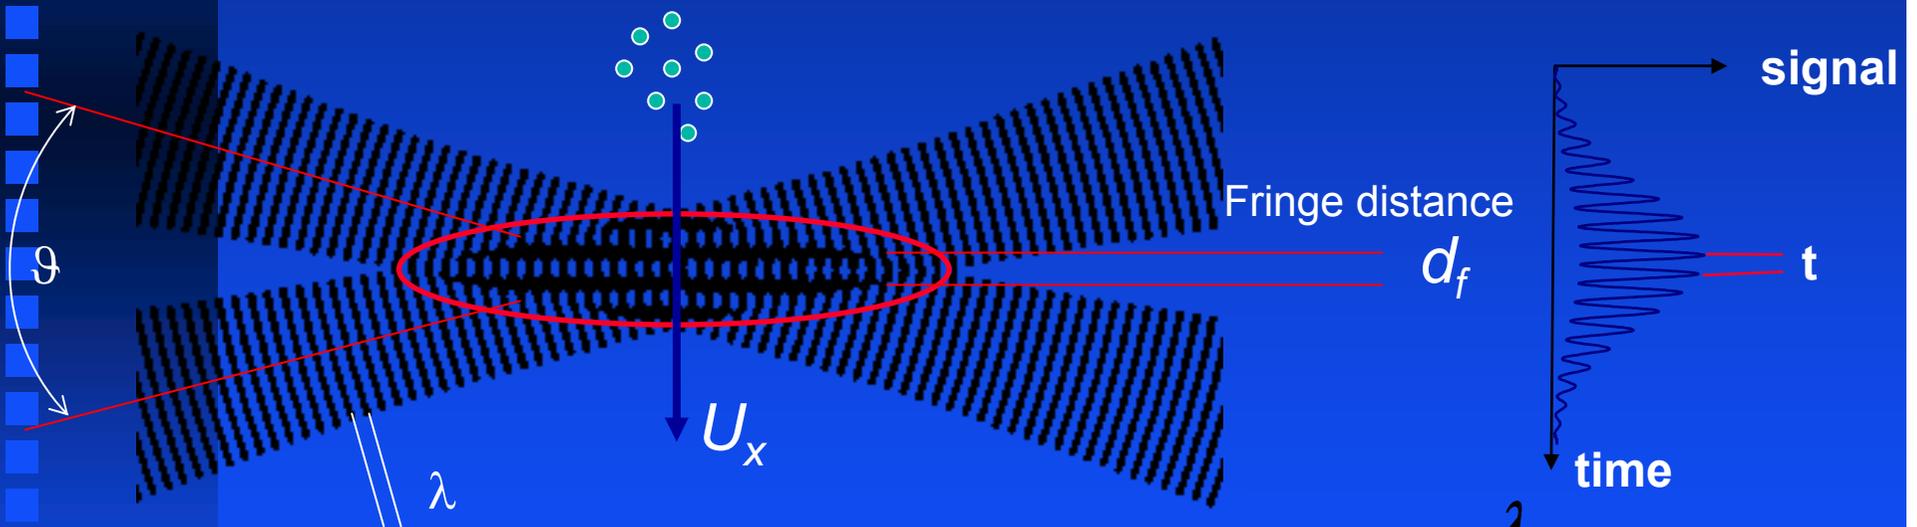

vectors

$\{u, v, u', v', T.I., \Omega_z, \}$

Laser Doppler Anemometer

- Probe volume: laser beams crossing: ellipsoid
- Tracer / seeding problematic

λ wavelength of the laser light

ϑ

f_D Doppler-frequency

$$d_f = \frac{\lambda}{2 \sin(\vartheta/2)}$$

$$U_x = d_f \cdot f_D$$
