# Stationary and transient flows

Steady vs.  
unsteady

Balogh  
Miklós

Steadiness

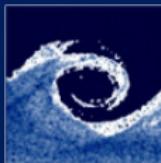

Block mesh

Analysis

Refining

- Transient (unsteady) flows
  - Every real flow in molecular sense
- Stationary (steady-state) flow refers to the condition
  - where the fluid properties do not change over time
  - all the time derivatives of a flow field vanish

Listing coordinates of the block vertices:

Listing 1: vertices in blockMeshDict

```
1 convertToMeters 1.0;  
2  
3 vertices  
4 (  
5     (-10    -10   -1) // P0  
6     (-1     -10   -1) // P1  
7     ( 1     -10   -1) // P2  
8     ( 30    -10   -1) // P3  
9     ...  
10 );
```

# Steps of the numerical analysis - blockMeshDict

Steadiness

Block mesh

Analysis

Refining

Listing the blocks, ordered list of vertex labels and mesh size:

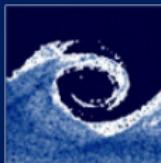

## Listing 2: blocks in blockMeshDict

```
1 blocks
2 (
3     // vertex numbers, number of intervals, interval grading
4     hex ( 0   1   5   4   16  17  21  20) (48 48 1) simpleGrading ( 0.1075 0.1075 1)
5     hex ( 1   2   6   5   17  18  22  21) (30 48 1) simpleGrading ( 1           0.1075 1)
6     hex ( 2   3   7   6   18  19  23  22) (71 48 1) simpleGrading ( 28        0.1075 1)
7     ...
8 );
```

Listing edges (line, polyLine, arc, simpleSpline, polySpline):

## Listing 3: edges in blockMeshDict

```
1 edges
2 (
3     // edge type, labels of end vertices, coord. of interpolation point(s)
4     arc 5   6   ( 0   -1   -1)
5     arc 6   10  ( 1    0   -1)
6     ...
7 );
```

# Steps of the numerical analysis - blockMeshDict

Listing boundaries (type, vertices of the faces):

Listing 4: boundaries in blockMeshDict

```
1 boundary
2 (
3     inlet
4     {
5         type patch;
6         faces
7         (
8             ( 0  4 20 16)
9             ( 4  8 24 20)
10            ( 8 12 28 24)
11        );
12    }
13    ...
14 );
15
16
17 mergePatchPairs
18 (
19 );
```

- Inlet (Dirichlet BC for U, Neumann BC for p)
  - fixed value for U ( $U = U_{in} = 1 \text{ ms}^{-1}$ )
  - zero gradient for p ( $\partial p / \partial n = 0$ )
- Outlet (Dirichlet BC for p, Neumann BC for U)
  - zero gradient for U ( $\partial U / \partial n = 0$ )
  - fixed value for p ( $p = p_{ref} = 0 \text{ Pa}$ )
- Walls
  - fixed value for U ( $U = 0$ )
  - zero gradient for p
- Front and back sides of a 2D domain
  - empty for both U and p
- Bottom and top sides
  - slip wall for both U and p
