

Required for the completion of the measurement assignment:

Hand written measurement plan

At least 1 sheet of A4 millimeter paper

A prepared measurement group, who have read and understand the measurement guidelines as well as their personal measurement assignment

Required for the acceptance of the measurement report:

One archive file (zip file) containing the measurement report (pdf) and the calculations (excel) needs to be uploaded to Poseidon

The measurement report must contain the following:

Cover

Measurement results, which is the entire body of the report (should not exceed 8 pages, not including the cover and the mandatory annex)

The measurement results should include the calibration diagram of the manometers, made using the Betz manometer

The measurement results need to include the uncertainty/error calculations

The handwritten measurement plan needs to be scanned and included in the measurement report as an annex.

If the measurement has an online correction program available (e.g. M01, see <http://www.ara.bme.hu/lab>), it needs to be completed and the validation code needs to be included on the report cover.
