A	- The chosen bodies should be the black painted solid bodies marked „D”! - Measure the drag forces acting on the supporting arm while placing the 5 bodies in front of the arm using the other support at 5 different velocities! (potentiometer settings: 4.5, 5, 7, 8.5, 10) - Measure the drag forces acting on the 5 chosen solid bodies (each having a different radius) at the 5 different velocities! - Record the atmospheric pressure and the temperature in the laboratory
B	- The chosen bodies should be the black painted solid bodies marked „D”! - Measure the drag forces acting on the supporting arm while placing the 5 bodies in front of the arm using the other support at 5 different velocities! (potentiometer settings: 2, 4, 6 , 8, 10) - Measure the drag forces acting on the 5 chosen solid bodies (each having a different radius) at the 5 different velocities! - Record the atmospheric pressure and the temperature in the laboratory
C	- The chosen bodies should be the black painted solid bodies marked „D”! - Measure the drag forces acting on the supporting arm while placing the 5 bodies in front of the arm using the other support at 5 different velocities! (potentiometer settings: 2.5, 4, 6 , 8, 9.5) - Measure the drag forces acting on the 5 chosen solid bodies (each having a different radius) at the 5 different velocities! - Record the atmospheric pressure and the temperature in the laboratory
D	- The chosen bodies should be the perforated paltes marked „A”! - Measure the drag forces acting on the supporting arm while placing the 5 bodies in front of the arm using the other support at 5 different velocities! (potentiometer settings: 2, 4, 6 , 8, 10) - Measure the drag forces acting on the 5 chosen solid bodies (each having a different porosity) at the 5 different velocities! - Record the atmospheric pressure and the temperature in the laboratory
E	- The chosen bodies should be the brown painted solid bodies marked „C”! - Measure the drag forces acting on the supporting arm while placing the 5 bodies in front of the arm using the other support at 5 different velocities! (potentiometer settings: 6-10) - Measure the drag forces acting on the 5 chosen solid bodies (each having a different radius) at the 5 different velocities!
F	- The chosen bodies should be the perforated paltes marked „A”! - Measure the drag forces acting on the supporting arm while placing the 5 bodies in front of the arm using the other support at 5 different velocities! (potentiometer settings: 2, 4, 6 , 8, 10) - Measure the drag forces acting on the 5 chosen solid bodies (each having a different porosity) at the 5 different velocities! - Record the atmospheric pressure and the temperature in the laboratory
G	- The chosen bodies should be the perforated paltes marked „B”! - Measure the drag forces acting on the supporting arm while placing the 5 bodies in front of the arm using the other support at 5 different velocities! (potentiometer settings: 3, 4.5, 6 , 7.5, 10) - Measure the drag forces acting on the 5 chosen solid bodies (each having a different porosity) at the 5 different velocities! - Record the atmospheric pressure and the temperature in the laboratory
H	- The chosen bodies should be the perforated paltes marked „B”! - Measure the drag forces acting on the supporting arm while placing the 5 bodies in front of the arm using the other support at 5 different velocities! (potentiometer

	settings: 3, 4.5, 6 , 7.5, 10) - Measure the drag forces acting on the 5 chosen solid bodies (each having a different porosity) at the 5 different velocities! - Record the atmospheric pressure and the temperature in the laboratory
I	- The chosen bodies should be the black painted solid bodies marked „D”! - Measure the drag forces acting on the supporting arm while placing the 5 bodies in front of the arm using the other support at 5 different velocities! (potentiometer settings: 3, 4.5, 6, 7, 9, 10) - Measure the drag forces acting on the 5 chosen solid bodies (each having a different radius) at the 5 different velocities! - Record the atmospheric pressure and the temperature in the laboratory
J	- The chosen bodies should be the brown painted solid bodies marked „C”! - Measure the drag forces acting on the supporting arm while placing the 5 bodies in front of the arm using the other support at 5 different velocities! (potentiometer settings: 4.5, 5, 7, 8.5, 10) - Measure the drag forces acting on the 5 chosen solid bodies (each having a different radius) at the5 different velocities! - Record the atmospheric pressure and the temperature in the laboratory
